- ✓ Headless commerce in production
- ✓ Magento 2 + Shopify
- ✓ 2+ years in production
- ✓ Advanced English
- ✓ Open to new opportunities

PROFESSIONAL SUMMARY

Full-Stack Developer with 2+ years in production, focused on headless commerce. I build storefronts with React, Next.js, and Shopify Hydrogen consuming the Magento 2 and Shopify Storefront GraphQL APIs. I also ship complete products, from frontend to database: multi-tenant SaaS, ERP integrations, and Python automations that solve real operational problems. I come from full product-cycle work, from client requirements gathering to deploy, and communicate well with technical and non-technical stakeholders.

PROFESSIONAL EXPERIENCE

Full-Stack Developer · Prosperity

Jan 2026 – Present | São Paulo, Brazil

- Build headless storefronts with React, Next.js, and Shopify Hydrogen, consuming the Magento 2 and Shopify Storefront GraphQL APIs to assemble PLP, PDP, cart, and checkout.
- Build Python automations that solve real operational problems: SKU divergence detection between Tiny ERP and Magento 2, product ABC curve, grid repositioning, and performance reports.
- Integrate ERPs (Tiny, Eccosys) with Magento 2 via REST API, syncing products, inventory, and order flows.
- Maintain and customize Magento 2 stores: modules, REST APIs, and custom extensions.

Requirements Analyst & Full-Stack Developer · Rime Tecnologia

Nov 2024 – Oct 2025 | São Paulo, Brazil

- Bridge between client and engineering: ran requirements meetings and translated client requests into closed scope, prioritized backlog, and realistic deadlines.
- Delivered end-to-end web and mobile solutions: landing pages, embedded systems, and scalable applications.
- Wrote the documentation that held delivery together (UML, use cases, API specs, user flows), cutting rework and client-side noise.
- Coordinated multidisciplinary squads, keeping delivery on schedule and aligned with client expectations.

FEATURED PROJECTS

Mise <i>Next.js 15 · Prisma · PostgreSQL · Stripe · Clerk</i> → Demo	Multi-tenant SaaS for restaurants to track food cost in real time. Cost computed at runtime (never stale in the database), multi-tenancy via Clerk Organizations, freemium with Stripe.
PawTrack <i>React Native · Expo · TypeScript</i> → GitHub	Collaborative pixel-art mobile app: a map for reporting lost or adoptable cats. Clean REST contract from the mock onward, buildable via EAS without a Mac.
Blue Future <i>Python · Scikit-learn · Next.js · Recharts</i> → Demo	End-to-end data pipeline: global plastic waste analysis turned into an interactive dashboard. Loads in under 1s via static JSON pre-processed at build time.

TECHNICAL SKILLS

Headless Commerce: Magento 2 · Shopify · Hydrogen · GraphQL · PHP · Tiny ERP · REST APIs
Frontend: React · Next.js · TypeScript · Tailwind CSS · React Native
Backend & Data: Node.js · Python · Pandas · Scikit-learn · PostgreSQL · Prisma
Infra & Tooling: Vercel · Git · Stripe · Clerk
